Enclosure Climate Control

Heat producing components currently widely used in electronic and industrial equipment enclosures present the problem of dissipating the heat generated before damage can occur to heat-sensitive parts. In many cases, the problem can be solved by ventilation, using simple air moving devices. However, in more and more applications the available ambient air is too warm or too contaminated to be used for the safe dissipation of the unwanted heat. Under those conditions, the life expectancy and performance of sensitive components may be adversely affected, often causing equipment malfunctions, slowdowns or failures.

In forced convection cooling of enclosures, cooler ambient air is drawn or forced through the components in an enclosure and discharged. When electronic/electrical enclosures are sealed to keep out moisture, dust, dirt and other contaminants, the heat generated by the components is trapped and closed-loop cooling (air conditioner or heat exchanger) is needed to maintain the optimum environment for the components.

*Our product offerings include an extensive array of units for virtually every type of application which customers can select from to address their enclosure ventilation or cooling requirement.

**COOLING PRODUCT SELECTION**

Our philosophy is to specify the smallest, least complex cooling device that will satisfy the requirements of the application.

**Forced Ventilation Air Cooling**
In clean, non-hazardous environments with acceptable ambient temperatures, a simple forced-air cooling system utilizing ambient air is usually adequate. Combined with a low-cost air filter, such devices generally meet the heat removal needs of typical electronic and electrical equipment.

**Closed-Loop Cooling**
In harsh environments involving high temperatures, heavy particulates, oil, or chemicals capable of damaging components, ambient air must be kept out of the enclosure. Sealed enclosures are generally used, with closed-loop cooling consisting of two separate circulation systems in a single unit. One system, sealed against the ambient air, cools and recirculates the clean cool air throughout the enclosure. The second system uses ambient air or water to remove and discharge the heat.

**General Specifications for all Air Conditioners**

- **CLOSED-LOOP COOLING:** The enclosure interior airflow system is isolated from the ambient airflow system. No ambient air can invade the cool, dehumidified, sensitive component compartment.
- **BALL-BEARING MOTORS:** All blower motors are UL/CSA Recognized and include automatic-reset thermal overload protection and double-sealed or double-shielded precision ball bearings. Special permanent lubricants perform over a broad temperature range: -20ºF (-29ºC) to 250ºF (121ºC). Tube axial fans are rated to perform at 14ºF (-10ºC) to 158ºF (70ºC) and are designed to meet UL, CSA and VDE.
- **BLOWERS:** All centrifugal blowers are designed and built to provide optimum airflow and pressure for each air conditioner design.
- **RUGGED CONSTRUCTION:** Precision-engineered heavy gauge steel construction of all shells and blowers ensures air conditioners will stand up under tough applications.*
- **BAKED POWDER FINISH:** Durable, baked-on powder finish is standard. Other finishes are available.*
- **POWER:** Units are available in 115 VAC, 230 VAC or 480 Volt.
- **REFRIGERANTS:** CFC-free R134a Refrigerant is used in all air conditioners for which compatible compressors are available. All others contain Zero Ozone Depleting Potential (ODP) R410a Refrigerant. The model number reflects the refrigerant. A 4 between the A and C signifies R134a; a 6 signifies R410a.
- **FILTERS:** Multi-layer grid of sturdy, corrugated aluminum in an aluminum frame. May be reused after washing off accumulations and spraying with A-16 Recoating Adhesive. Filters must be kept free of accumulations to prevent reduction or loss of performance and/or damage to equipment. Filters are not required on water-cooled models.
- **CONDENSATE DISPOSAL:** Condensate drain fitting and hose are included. Built-in Condensate Evaporators are standard in many models. (See Series sections)
- **POWER CORD:** All models have 3-wire power cords. 480 Volt models are supplied with an external junction box for permanent wiring as a Standard Feature. Single phase UL listed units are supplied with a plug.
- **INSULATION:** All cold components, lines and the evaporator compartment are insulated with high-performance insulation for maximum efficiency.
- **GASKETING:** All units are fully gasketed for tight, leakproof installation in compliance with the NEMA 12, 3R or 4/4X Enclosure Ratings.
- **QUALITY ASSURANCE:** Refrigeration system components are kept sealed until charged with refrigerant; all brazed joints are thoroughly leak-tested; each unit is functionally tested before shipment.
- **INSTALLATION:** Installation instructions, including mounting plan drawings, are included with each unit.

* See Guardian, Guardian 480 Volt for different specifications applicable.

Guardian Series, SlimKool Series, Compact Series, Compact Plus Series, and Advantage Series are brand names of KOOLTRONIC, Inc., Pennington, NJ
Air Conditioner Sizing and Selection
Climate Control

Cooling Electronic Control Cabinets
Most electronic control systems generate a substantial amount of heat during operation. This heat factor is intensified as electronic controls are made more compact, perform more functions and are placed in confined areas. Additional problems are encountered when the electronic process control system is located on-line in an industrial setting, rather than in a clean computer room. The factory environment can be hostile to the point that performance and effective life of the electronic components are materially reduced or the control system fails completely. Ambient temperature might be excessively high, as that found in a steel mill. Moisture-laden air and airborne particulate matter might be present to adversely affect the electronic components, as in the paper manufacturing industry. Air conditioners are designed to perform reliably under many of these harsh conditions and to provide the cooling and environmental protection required by sensitive electronic production control systems.

Factors Affecting Model Selection
This section is presented as a basic outline or checklist of the various application conditions to be considered when choosing a cooling unit. These are the factors which must be considered when selecting a cooling unit:

Internal Heat Load
This is the heat dissipated by the electronic controls. It is expressed in watts. One WATT equals 3.413 BTU/HR. Thus, to obtain the approximate cooling capacity required to remove a specific heat load, the following formula can be used: Watts x 3.413 = BTU/HR. For example, a heat load of 800 watts, require an air conditioner capable of removing at least 2,730 BTU/HR.

Resistance to Airflow in the Enclosure
Airflow is measured in cubic feet per minute (CFM). To create an air flow of any desired velocity requires that pressure be produced by the blower. Resistance to this blower-produced air flow is created by obstructions within the cabinet in the air flow path. The resistance itself is called static pressure (SP) and is measured in inches of water column. The effect of significant restrictions in the cabinet air flow path are as follows:
- the obstructions cause static pressure.
- static pressure results in a pressure drop, or differential, from the air velocity produced by the blower.
- this reduction in cool air flow will decrease the effective capacity of the cooling unit. Allowance must be made for static pressure.

Heat Load from the Surroundings
Ambient conditions can cause a heat gain in the enclosure. The rated capacity of the cooling unit must be sufficient to handle this heat gain. When evaluating the additional heat load gained from the surroundings there are two possible conditions:

- the cabinet is insulated and well sealed
- the cabinet is not insulated.

Cabinet Insulated - Normally, well-insulated cabinets do not gain sufficient heat from the surroundings to affect the air conditioner operation. BTU/HR ratings for Kooltronic air conditioners have been established at the maximum ambient operating temperature of 125°F. A substantial improvement in heat removal occurs when operating in ambient temperatures below 125°F.

Cabinet Not Insulated - Obviously, this design places more of a burden on the cooling unit. Heat is conducted to the cool side. Thus, high ambient heat will be readily transmitted into the cooler enclosure. To determine the additional capacity required of an air conditioner installed in an uninsulated cabinet, the surface area of the enclosure must be calculated to obtain the total effective heat transfer area. For this calculation, use the surface area of the sides, plus the area of the top and omit the bottom area of the cabinet.
Air movement outside the uninsulated cabinet will increase the heat conducted from the ambient into the enclosure. When there is little or no air circulation outside the cabinet, the layer of air immediately adjacent to the exterior cabinet walls acts as an insulating film. Exterior air movement dissipates this insulating layer of air in proportion to the velocity of the air flow. Substantial ambient air circulation will increase the transmitted heat load imposed on the cooling unit. If the cabinet being cooled is not air tight, high ambient relative humidity will adversely affect the cooling effectiveness of the air conditioner. When humid air infiltrates a poorly sealed enclosure, the air conditioner is required to use up valuable capacity just to condense the moisture from the internal air. Conversely, if the cabinet is well sealed, high ambient relative humidity has very little effect on the rated capacity of the air conditioner.
The proper selection of an air conditioner is determined by the following criteria:

1) Required cooling capacity BTU/HR.
2) Mounting requirements (top, side or internal mounting)
3) Dimensions of air conditioner & enclosure

To determine air conditioner capacity required:

First

1 Watt = 3.413 BTU/HR
Determine the internal Watts of heat to be dissipated.

Second

1 M² = 10.76 ft²
Calculate the area of the enclosure which is exposed to the ambient air:

\[
\frac{2H'' (W'' + D'')} + (D'' x W'')}{144} = \text{Area (ft²)}
\]

Third

1 °C Δ T = 1.8 °F Δ T
Determine the temperature differential Δ T (°F) by subtracting the maximum allowable internal cabinet temperature (T_i) from the maximum ambient temperature outside of the enclosure (T_o): T_o - T_i = Δ T

Fourth: (Watts x 3.413) + [1.25 x Area ft² x Δ T (°F)] = BTU/HR.

Air Conditioner Accessories and Options

Factory Installed Options

Accessories & Options
- Adapter Plates
- Compressor Heater
- Condensate Evaporator Kit
- Deep Drain Pan Kit
- Enclosure Heater
- Filter Recoating Adhesive
- Internal Corrosion Protection
- Lifting Eyes
- Low Airflow Detector
- Low Ambient Kit
- Mounting Hinge
- Programmable Thermostat
- Replacement Filters
- Short Cycle Protector
- Special Motors, Line Cords, or Connectors
- Special Materials or Finishes
- Stainless or Aluminum Cabinet
- Temperature Alarm
- Weather Protection Kit

Some options may not be available on selected models.
Some options are available as standard features on selected models.

Filter Fans
NEMA 1 Box Fan

Description
High airflow with low noise operations makes these versatile packaged fans very popular in a wide range of applications. Reversible mounting brackets allow user to push or pull air through the enclosure. In addition, these fans can be installed internally or externally, vertically or horizontally, with or without a filter. Utilizing the special motor-mount isolation system, these fans operate virtually vibration-free. Front and rear grilles can be adjusted to accommodate or omit filter. Filter slides in and out easily for cleaning and replacement.

Accessories

All Packaged Fans
• Filter Recoating Adhesive
• Replacement Filters (531F for KP40, 681F for KP60, 1081F for KP100)
• Special Materials or External finishes
• Special Motors, Line Cords or Connectors
• Variable Speed Control
• Adapters
• Grille Assemblies (KFG40, KFG60, KFG100) Includes Filter

Features
• Exceptionally Quiet
• Versatile Mounting and Adaptability
• Heavy-Gauge Steel Construction
• UL/CSA Ball-Bearing Motors
• Attractive Stainless Steel Grilles
• All models Can Pressurize or Exhaust
• Accessories and Options

Additional Specifications

Permanent Filter: Furnished with each packaged fan.

Grille/Guard: KP40, KP60 and KP100 each include a rear guard and an attractive stainless steel grille and knurled captive fasteners for easy removal. Grilles and guards comply with OSHA and UL safety standards.

Advantage Sentry Series
Filter Fans Filter-Grille Assemblies

Model
BLKNPA100F

Description
These Filter-Grille Assemblies can be used in conjunction with the Advantage Sentry Series Filter Fans for enclosure cooling. In a typical mounting orientation the motorized Filter Fan pulls air into an enclosure while the Filter-Grille Assembly functions as an outlet. Alternatively, if the reverse airflow option is chosen for the filter fan, the fan exhausts the enclosure and the Filter-Grille Assembly functions as an intake. These Filter-Grille Assemblies feature filters that are easily removed for cleaning or replacement.

Standard Features
- Integrated Sealing Gasket
- Surface Mounting
- Baked Powder Finish
- Washable, Reuseable Filter

Accessories & Options
- Replacement Filter (P/N: 1081F)

Drawings

Typical Mounting Orientations
Blue arrows show direction of airflow. Boxes represent side view of electronics/electrical enclosure.

Notes: Data subject to change without notice. Consult factory for special requirements. Dimensions are in inches. Millimeters shown in [ ] are for reference only.
Guardian Series
NEMA 4 or 4X Filter Fans

Standard Features
- Baked Powder Finish
- Integrated Fan Guards
- Integrated Sealing Gasket
- IP55 Filter Protection
- Most Assemblies are UL/cUL Approved
- NEMA 4 or 4X Rating Maintained (if used with provided filter)
- Secure Mounting
- Stainless Steel Shell (NEMA 4X Models)
- UL/CSA Shielded Ball Bearing Motors
- Washable, Reuseable Filter

Accessories & Options
- Filter-Hood Assembly (Recommended) (P/N: BLKNPA60FL, BLKNPA60FLV)
- Other Voltages, Both AC & DC
- Replacement Filters (P/N: 0429-01-01)
- Available with Reversed Airflow Direction

Performance
Airflow vs. static pressure curves are shown for 60 Hz and 50 Hz (broken line) inputs.

* Fan airflow without filter or grille.
** NEMA Rated if installed with provided filter.

For general ventilating use only. Do not use these fans to exhaust hazardous or explosive material or vapors.

NOT ALL SYSTEMS ARE SUITABLE FOR UTILIZING OUTSIDE AIR. To protect sensitive components against condensation an enclosure heater or closed-loop cooling is recommended. To protect sensitive components against corrosive elements closed-loop cooling is recommended.

**Notes:** Data subject to change without notice. Consult factory for special requirements. Dimensions are in inches. Millimeters shown in [ ] are for reference only.

Climate Control Products

NEMA 12 Filter Fans

Applications
- Industrial and Process Automation
- Packaging and Logistical Systems
- Energy (Solar, Wind, Water and Petrochemical)
- Telecommunications
- Defense Systems

Standards
- UL Recognized
- CSA Listed
- IP54 Rated
- IP55 Capable with Optional Filter
- Type 12

Product Options
- 5 Different Size Footprints for Flexibility
- CFM Range of 21 CFM - 585 CFM
- Voltage : 115VAC *
- Operating Temperature: 14°F (-10°C) to 140°F (60°C)
- All Models UV Resistant ABS blend; RAL 7035
- MTBF of 50,000 Hours
- All Units Functionally Tested Before Shipment

* 230VAC, 460VAC, 12VDC, 24VDC, 48VDC are also available in most model numbers

Construction
- Snap in mounting that does not require hardware
- Simple adjustment of airflow reversal; push/pull
- Retention clips designed to accept wide range of enclosures
- Hinged cover design for easy filter replacement
- Spring loaded terminal blocks for reliable electrical connection
- Gasketing and user manuals provided

Accessories
- Grills
- Replacement filters

Notes: Data subject to change without notice. Consult factory for special requirements. Dimensions are in inches. Millimeters shown in ( ) are for reference only.

Enclosure Heaters are used to maintain minimum operating temperatures and to help prevent failure of electronic components caused by condensation and corrosion.

Follow steps 1-5 to determine the heating requirement of an enclosure (US units - left column, metric - right column)

**STEP 1: Determine Surface Area (A) exposed to open air**

Enclosure Dimensions: height = __________ feet __________ meters
width = __________ feet __________ meters
depth = __________ feet __________ meters

Assuming a free-standing enclosure ⇒ $A = 2 (\text{Height} \times \text{Width}) + 2 (\text{Height} \times \text{Depth}) + 2 (\text{Width} \times \text{Depth})$

$$A = \boxed{\text{_______ ft}^2} \quad \text{or} \quad \boxed{\text{_______ m}^2}$$

**STEP 2: Choose the Heat Transmission Coefficient (k) for your enclosure**

- painted steel = 0.511 W/(ft² • K) 5.5 W/(m² • K)
- stainless steel = 0.344 W/(ft² • K) 3.7 W/(m² • K)
- aluminum = 1.115 W/(ft² • K) 12 W/(m² • K)
- plastic (or insulated stainless) = 0.325 W/(ft² • K) 3.5 W/(m² • K)

$$k = \boxed{\text{_______ W/ft}^2 \cdot \text{K}} \quad \text{or} \quad \boxed{\text{_______ W/m}^2 \cdot \text{K}}$$

**STEP 3: Determine the Temperature Differential ($\Delta T$)**

Desired interior temperature = __________ °F __________ °C
Lowest ambient temperature = __________ °F __________ °C
Temperature differential = __________ °F __________ °C

Calculation requires $\Delta T$ to be in Kelvin (K)

Divide $\Delta T$ (°F) by 1.8 for

$$\Delta T = \boxed{\text{_______ K}} \quad \text{or} \quad \boxed{\text{_______ K}}$$

**STEP 4: Determine Heating Power ($P_v$), if any**

$P_v =$ components in the enclosure which generates heat (i.e. transformers, power supplies, etc.)

$$P_v = \boxed{\text{_______ W}} \quad \text{or} \quad \boxed{\text{_______ W}}$$

**STEP 5: Calculating the Required Heating Power ($P_h$)**

If enclosure is located inside:

$$P_h = (A \times k \times \Delta T) - P_v = \boxed{\text{_______ W}}$$

If enclosure is located outside:

$$P_h = 2 \times (A \times k \times \Delta T) - P_v = \boxed{\text{_______ W}}$$
Climate Control Products

Heaters
PTC Fan Heaters

Climate Control

Description

PTC fan heaters are designed to help prevent failure of electronic components caused by condensation, corrosion and low temperatures. Integrated thermostat stabilizes enclosure temperature, improves performance and extends the life of critical components. EFHT series fan heaters are designed for larger applications with high power requirements.

Features

- Compact fan heater in PTC technology
- PTC (Positive Temperature Coefficient) heating element
- Maintains minimum operating temperatures in enclosures
- Helps prevent failure of electronic components caused by condensation and corrosion
- Heating power adjusts to ambient temperature
- Integrated adjustable thermostat and control light
- 35 mm DIN rail mountable
- UL, VDE, and CE

For spacing, add 2" clearance to heat sensitive parts.

Technical Data

- Heating element: PTC-Semiconductor/resistor. Self regulating with changing ambient temperature (see graph below)
- Overheat protection: Temperature limitor in case of fan failure
- Function control light: LED
- Housing: Plastic, rated UL94V-0
- Dimensions (HxWxD): 6.5x3.94x5" (165x100x128 mm)
- Connection: 2 pole terminal, AWG 14, max. (2.5 mm²)
- Mounting: Clip for 35 mm DIN rail, EN 50022
- Protection class: II (double insulated)
- Protection type: IP20

Notes: Data subject to change without notice. Consult factory for special requirements. Dimensions are in inches. Millimeters shown in ( ) are for reference only.
Heaters

PTC Heater

Description

PTC heaters are designed to help prevent failure of electronic components caused by condensation, corrosion and low temperatures. EH15 series feature PTC technology and are designed for smaller enclosure applications with lower wattage requirements.

Features

- Compact heater in PTC technology
- PTC (Positive Temperature Coefficient) heating element
- Maintains minimum operating temperatures in enclosures
- Helps to prevent failure of electronic components caused by condensation and corrosion
- Push connectors for quick and easy wiring
- 35 mm DIN rail mountable
- UL, VDE, and CE

(1) At 68°F (20°C) ambient temperature.
(2) Inrush current

Technical Data

- Operating voltage: AC/DC 110-250V
- Heating element: PTC resistor, self regulating
- Heating body: Anodized extruded aluminum
- Protection class: I, test voltage 1600V
- Protection type: IP20
- Connection: Push type terminals for stranded and rigid wire 3 x AWG 20-AWG 16 (0.5-2.5 mm²)
- Mounting: Clip for 35 mm DIN rail, EN 50022
- Agency approvals: UL, VDE

Notes: Data subject to change without notice.
Consult factory for special requirements. Dimensions are in inches. Millimeters shown in () are for reference only.

*Description*

Fan heaters are designed to help prevent failure of electronic components caused by condensation, corrosion and low temperature. EFH100-120 series feature a wide wattage range for maximum versatility in a small compact design.

*Features*

- Small compact size fan heater
- Maintains minimum operating temperatures in enclosures
- Helps prevent failure of electronic components caused by condensation and corrosion
- Built-in overheat protection
- 35 mm DIN rail mountable

*Discount Schedule: C2*

Temperature & Humidity Controls
Small Thermostat
Climate Control

Description
Small thermostats are easy to install and designed to regulate the air temperature inside enclosures. Thermostats increase operating life of fans, heaters and heat exchangers. ESTNC-F (normally closed) thermostat opens at temperature rise and is used to control heaters and low temperature alarms. ESTNO-F (normally open) thermostat closes at temperature rise and is used to control cooling fans, air conditioners and high temperature alarms.

Features
- Compact design
- Wide adjustment range
- Color coded temperature dials
- 35 mm DIN rail mountable
- Tolerance ±72°F (4K)
- 2-pole terminal for AWG 14 max.
- Protection type: IP30
- Plastic housing UL94V-0

Electronic Humidity and Temperature Control

Description
Electronic humidity and temperature control regulates the air temperature and relative humidity inside enclosures. Depending on which contact combination is chosen, the control turns on or off a connected device if either the temperature is below, or the humidity is above the set point.

Features
- Controls both temperature and humidity
- High switching capacity
- Optical function display
- 35 mm DIN rail mountable
- Tolerance ±3.6°F (2K)
- 5-pole terminal for AWG 14 max.
- Protection type: IP20
- Plastic housing UL94V-0
