

Vessel tray systems

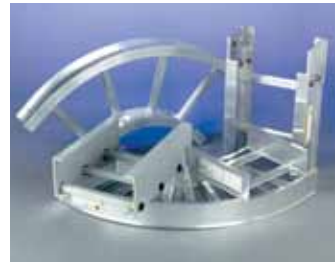

Save time, money & material with
“built to spec/design petrochemical vessel tray systems”

We are an industry leader in petrochemical cable support systems. By reviewing your petrochemical project vessel design specifications, we can manufacture “ready to install” Vessel Tray Systems to meet your most stringent requirements. Our systems help eliminate costly and labor intensive modifications needed to help make straight tray section, splice plates and hardware fit your tanks or vessels.

Every section fits with no additional cutting, fitting or left over scrap. The option to mount cable tray before erecting the vessels or tanks saves installation time.

- Efficient structural shape I-Beam side rail and rung design
- “Copper-free” 6063-T6 aluminum alloy
- Capable of supporting a 200 lb. concentrated load
- 4" and 6" side rail heights
- 6" and 18" widths
- Standard 10' lengths

Taking the hassles out of mounting cable support systems on you next petrochemical project is only a phone call away.

We recommend supports to be placed every 5 feet on the vessel tray system at ¼ point locations for best performance.
