Re: Halogen Free Initiative

Dear Valued Customer:

Cooper Bussmann is committed to meeting the anticipated market and regulatory requirements regarding the use of halogens. To that end, Cooper Bussmann is proud to announce a Halogen Free Initiative for all Coiltronics® branded inductors and transformers.

Coiltronics is committed to phasing out halogenated materials in our products by the end of calendar year 2009. To achieve this, Cooper Bussmann has commenced halogen testing and will phase out halogenated materials where economically viable and safe substitutes are available.

Cooper Bussmann has defined "halogen free" by homogeneous material within a component through the following threshold limits:

Chlorine (Cl) < 900 ppm
Bromine (Br) < 900 ppm
Chlorine (Cl) + Bromine (Br) < 1500 ppm

Cooper Bussmann is committed to providing all of our customers with the highest quality products and services in meeting the industry's anticipated "Halogen Free" initiative. For questions regarding this Halogen Free Initiative please contact your Cooper Bussmann sales representative or product manager. We thank you for your time and efforts in supporting this initiative.

Regards,

Robert Gundlach
