Cord Installation

Note: Installation kit must be used when connecting cord to fixture due to extreme temperature. Failure to do so may result in the melting of standard wire nuts and insulation on lead wires as they are only rated to 90C.

1. Slide ½” strain relief onto cord. Strip cord back exposing lead wires of a max. length of 4 inches.
2. Connect ground wire from cord to ground wire connected to fixture with porcelain wire nut supplied in installation kit.
3. Connect the remaining two wires from the sockets to either the black or white wires using the remaining two porcelain wire nuts supplied in the installation kit.
4. Push wires back into fixture.
5. Screw in the base of strain relief connector. Do not tighten top of strain relief until base is tight to avoid wire twisting.
6. Once base of connector is tight, tighten top ring to seal cord.
7. Connect power supply.

Fixture Mounting

Trunnion Mount (QAL - T)
1. First secure base of trunnion to desired area using a maximum 3/8” bolt or screw and lock washers (not supplied).
2. If pre-drilling is necessary, drill 2 holes at a spacing of 2” (5.1 cm) to accommodate bolts being used.
3. Once fixture is fastened down, loosen bolts “A”, using a 9/16” wrench, adjust fixture to desired angle, then re-tighten bolts to secure.

Post Mount (QAL - P)
1. Loosen bolt “B” to allow post mount to accept maximum 2” O.D pipe (1½” rigid conduit).
2. Once fixture is placed on pipe, rotate fixture assembly to the desired direction and tighten bolt “B”.
3. Loosen bolts “A”, using a 9/16” wrench, adjust fixture to desired angle, then re-tighten bolts to secure

Maintenance

1. Keep glass and reflectors clean to maintain maximum light output.
2. When cleaning glass disconnect power supply and let fixture cool to eliminate the possibility of the glass breaking due to the sudden change of temperature.
3. When replacing lamp, keep protective sleeve on new lamp until it is in place. Refraining from this operation may reduce the life of the new lamp.
