Installation & Maintenance Information

SAVE THESE INSTRUCTIONS FOR FUTURE REFERENCE

CAUTION
Read carefully before installing and wiring the luminaire. Check the ratings to insure suitability for the area. Must be installed in accordance with the NEC (National Electrical Code) and all other applicable codes. All luminaires must be properly grounded. These luminaires are not suitable for hazardous locations. These luminaires are not typically provided with cable entry holes.

INSTALLATION & ELECTRICAL WIRING

WARNING
Risk of electrical shock hazard, only qualified personnel should conduct this procedure! Do not make electrical connections with the power ON. Use Cu or Cu clad wire only, rated for 105°C.

1. The mounting holes should be at a 45° angle from vertical, on a 5 1/8" bolt circle. Mount the junction box (0A) in its intended location with (2) minimum size 1/4" bolts (not provided).
2. Install cable gland(s) (not provided) into the junction box (0A) and assure a proper seal as per the manufacturers instructions.
3. Strip the supply cable(s) jacket (not provided) back approximately 15".
4. Route cable thru the gland and tighten as per the manufacturers instructions to create a proper seal on the cable. Attach ground wire to the green screw (9D) in junction box (0A).
5. Route the cable thru the junction box gasket (7B) and thru the 90° adapter (1C). Align the holes in the 90° adapter with the gasket (7B) and junction box (0A) holes. Install screws (9B) (qty 4, #10-24) in place and tighten to approx. 12-15 in.lbs. For aluminum fixtures, apply the lubricant provided to the screw threads.
6. Install gasket (7A) into the 90° adapter (1C) and align the (4) holes to accept the lampholder screws (9C).
7. Strip the insulation of the supply wires back approximately 3/8".
8. On the back of the lampholder (4A), connect the black hot lead(s) to the dark colored screws contacts, connect the white neutral lead(s) to the light colored screw contacts. Tighten screws to approximately 8-10 in.lbs.
9. Install screws (9C) (qty 4, #8-32), passing them thru the lampholder (4A), gasket (7A) and thread into the 90° adapter (1C). Tighten to approximately 10 in.lbs. For aluminum fixtures, apply the lubricant provided to the screw threads.
10. Thread reflector (3A) clockwise onto the 90° adapter (1C), and tighten firmly by hand.

WARNING
Note maximum lamp wattage rating as indicated on the luminaire. Exceeding this can cause overheating, premature failure and be dangerous. The lampholder is rated for a maximum of 600 volts. The voltage of the lamp must correspond with the supply voltage.

11. Install the proper wattage lamp (not provided) into the lampholder, making sure the center contact of the lamp seats well into the lampholder.
12. Thread the glass globe (1A) clockwise into the 90° adapter (1C), and tighten firmly by hand until the globe stops and seats well against the internal gasket (7A).
13. Align reflector (3A) in desired position.
14. Thread the guard (2A) clockwise onto 90° adapter (1C). Tighten firmly by hand to secure guard and reflector in position. For aluminum fixtures, apply the lubricant provided to the threads of the guard. (Luminaires with option "PG" plastic glbes, the guard (2A) is not provided)

*Add one of the following suffixes to the part number above to obtain the proper globe: Clear - CLR Blue - BLU Clear HR - HR Frosted - FST Green - GRN Red - RED Yellow - YEL

**A = Aluminum B = Brass

All holes added should be done by qualified personnel through the thickened areas of the junction box suitable for threading. The junction box can be drilled and tapped a maximum of (4) places, up to a maximum 1" NPT. Do not attempt to install this luminaire unless you are familiar with warnings, cautions and procedures outlined in this information sheet.

See note below for option T, T6 & K

Assembled View

Mounting Dimensions

Option "SP" for shock proof lamp holder

Option "P" for porcelain lampholder

Note: If luminaire is provided with terminal block, (option T or T6), connect incoming black and white supply leads to the screws adjacent to the black and white wires on the terminal block. Connect the black and white wires from the terminal block to the back of the lampholder as per step 8 above. If provided with option "K" for a double pole switch, connect the black and white supply leads to the leads on one side of the switch. Connect the 2 leads on the other side of the switch to the lampholder contacts as per step 8 above.
