HID LUMINAIRES
Installation & Maintenance Information

SAVE THESE INSTRUCTIONS FOR FUTURE REFERENCE

Read carefully before installing and wiring the luminaire. These instructions include information for installation in both hazardous and marine locations. Any warning or special instructions should be closely followed. Marine installations on boats should be done in accordance with the regulations of the USCG CFR46, SUB CHAPTER J, PARTS 110-113. Hazardous area installations should be done in accordance with article 500 and 501 of the NEC. Check the ratings to insure suitability for the area.

INSTALLATION & ELECTRICAL WIRING

WARNING: Risk of electrical shock hazard, only qualified personnel should conduct this procedure. Do not make electrical connections with the power ON. Disconnect supply circuit at least 30 minutes before opening fixture for servicing and/or re-lamping. Refer to fixture nameplate for minimum supply wire rating.

1. Define mounting position of crane boom mount (6D). See mounting dimensions illustration below. If needed cut 1-7/8” diameter pipe to desired length. Mount and/or weld crane boom mount in place. Assemble fixture to crane boom mount using 7/8” bolts and washers (9I, qty 3x) with nuts (9H, qty 3x) provided.
2. Unlatch all four (4) ballast box cover latches (5A) and open cover (6B). Avoid damaging the sealing gasket during installation and/or servicing.

NOTE: Fixtures are supplied with 6 feet of 14/3 - 600VAC - SEOW cable (thermoplastic rubber jacket, oil resistant for outdoor use).

WARNING: See nameplate for voltage & frequency requirements!
Fixtures may be provided with multi-voltage ballast (120/208/240/277) vac 60Hz. Unless otherwise specified at time of order, fixtures are pre-wired for 120 vac. To change the voltage, remove the wire nut from the desired voltage lead. Make sure unused voltage leads ends are capped with wire nuts.
3. Connect L1 or hot lead to the desired voltage. Connect L2 or neutral to the ballast common yellow wire or white lead. Connect ground wire to green ground wire (8E). See wiring diagram illustration below.
4. Close ballast box cover (6B) and securely close all four (4) latches (5A).
5. Unlatch all eight (8) lens frame latches (5B) and open the lens frame. Avoid damaging the sealing gasket during installation and/or servicing.
6. Loosen wing nuts (9A) and remove lamp support bracket (6A).
7. Verify that the H.I.D. lamp complies with lamp specifications on fixture nameplate.
8. Install the proper wattage lamp (not provided) into the lampholder (4A), making sure the center contact of the lamp seats well into the lampholder.
9. Replace lamp support bracket (6A) and tighten wing nuts (9A).
10. Close lens frame and securely engage all eight (8) lens frame latches fully engaged. Replace cracked or damaged lens prior to use.
11. Aim the fixture. Remove the position locator screws (9G) (qty 2x, 1/4-20).
12. Loosen the two bolts (9I) holding the "U"-shaped bracket to the housing.
13. Rotate the fixture to the desired direction and install both position locating screws (9G).
14. Securely tighten the "U" bracket bolts (9I).

WARNING: If aiming position must be readjusted, use caution, as external surfaces may become extremely hot.

Grease crane boom thru 1/8” grease insert (5D).

COMPONENT TRAY REPLACEMENT

1. Unlatch all four (4) cover latches (5A) and open cover (6B).
2. Disconnect supply wires. Disconnect ground wire.
3. Remove four corner nuts (9E) (qty 4, 1/4-20) from bottom of tray.
4. Pull tray (4F) up and out of ballast box.
5. To install component tray (4F) perform these steps in reverse order.
