**SAVE THESE INSTRUCTIONS FOR FUTURE REFERENCE**

**WARNING** Risk of electrical shock hazard, only qualified personnel should conduct this procedure!

Do not make electrical connections with the power ON. Use Cu or Cu-clad wire only. These units are provided with receptacles rated 20 amps, either 125 or 250 vac. Consideration to the number of receptacles installed on each line should be given when selecting cable size. Apply lubricant to all screws and threads during installation, failure to use can result in voiding warranty.

1. Locate and drill cable gland hole through the thickened area of the junction box (0A) per instructions furnished with cable gland (not provided). Clean all foreign material out of junction box.
2. Mount the junction box (0A) in its intended location using 1/4" bolts (not provided). See illustration below for mounting dimensions.
3. Cables should be stripped back approx. 6" - 10" to allow individual wires to flex.
4. Install cable glands (not provided) per instructions furnished with cable gland.
5. Route cable through cable gland and secure seal on cable jacket.
6. Connect L1 (Hot) lead to the dark colored screw on the side of each receptacle (4A).
7. Connect L2 (Neutral) lead to the light colored screw on the side of each receptacle (4A).
8. Connect Green or earth wire to green Ground screw (4B) on rear of each receptacle (4A).
9. Mount each receptacle (4A) to the cover (1A) with two #8 screws (9A) provided using the plastic spacer (9C) between the receptacle and cover.
10. Slip gasket (7A) over cover (1A) so it can be installed between the cover and junction box (0A).
11. Mount cover with #10 screws (9B) provided. Torque screws only enough to insure a good gasket seal (approx. 10-20 in.lbs).

**CAUTION** For watertight connections use Pauluhn Plugs: 2603BU (15A,Brass) / 2603AU (15A,Alum.) / 2606BU (20A,Brass) / 2606AU (20A,Alum).
