ProConnect PPR SERIES
PLUGS AND RECEPTACLES
Installation & Wiring Information

SAVE THESE INSTRUCTIONS FOR FUTURE REFERENCE

CAUTION Read carefully before installing and wiring. Any warning or special instructions should be closely followed. Check the ratings to ensure suitability for the environment & supply. Must be installed in accordance with the NEC or CEC and all other applicable codes.

All devices must be properly grounded. These devices are not suitable for hazardous locations. Do not attempt to install these devices unless you are familiar with warnings, cautions and procedures outlined in this information sheet.

INSTALLATION & ELECTRICAL WIRING

WARNING Risk of electrical shock hazard, only qualified personnel should conduct this procedure! Do not make electrical connections with the power ON. Use cu or cu clad wire only. These devices are for operation up to 300 vac max. 20 amps, see marking on plug / connector / receptacle for voltage and current rating.

PLUG:
1. Route supply cable (not provided) through cable nut (3A), through grommet (6A), through threaded ring (2A), gasket (7A) into wiring cover (5A).
2. Cable should be stripped back approx. 1"-2" to allow individual wires to flex.
3. Strip the insulation of the supply wires back approximately 3/8".

CAUTION See marking on plug for voltage and current rating.
4. Make electrical connections to plug (4A).
5. Place wiring cover (5A) over plug (4A) connections.
6. Tighten screws (9A).
7. Slide gasket (7A) and threaded ring (2A) over wiring cover (5A).
8. Push cable grommet (6A) inside wiring cover (5A).
9. Tighten cable nut (3A) to wiring cover (5A).

IN-LINE CONNECTOR:
1. Route supply cable (not provided) through cable nut (3B), through grommet (6B), into wiring cover (5B).
2. Cable should be stripped back approx. 1"-2" to allow individual wires to flex.
3. Strip the insulation of the supply wires back approximately 3/8".

CAUTION See marking on connector for voltage and current rating.
4. Make electrical connections to connector (4B).
5. Place wiring cover (5B) over connector (4B) connections.
6. Tighten screws (9B).
7. Push cable grommet (6B) inside wiring cover (5B).
8. Tighten cable nut (3B) to wiring cover (5B).

RECEPTACLE:
1. Route supply cable (not provided) through cable nut (3C), through grommet (6C), into junction box (1C).
2. Cable should be stripped back approx. 3"-4" to allow individual wires to flex.
3. Strip the insulation of the supply wires back approximately 3/8".

CAUTION See marking on receptacle for voltage and current rating.
4. Make electrical connections to receptacle (4C).
5. Connect Green or earth wire to ground wire (9E).
6. Mount receptacle (4C) using screws (9C) to cover (5C) with gasket (7C) between receptacle and cover.
7. Slip gasket (7D) over cover (5C) to place between the cover and junction box.
8. Mount cover (5C) to junction box (1C) with screws (9D).
9. Tighten screws (9D) to create a proper seal.
10. Push cable grommet (6C) inside junction box (1C).
11. Pull excess cable out of junction box (1C) and tighten cable nut (3C) to junction box.
