WARNING
Make sure power is OFF before attempting any work.

Exit sign housing is assembled to fixture globe ring assembly. Exit sign housing may be assembled to fixture that is already installed or assembled to globe ring assembly as part of the fixture installation. If the exit sign housing is assembled to a globe ring assembly that is separate from fixture, make sure there is sufficient room to turn exit sign housing when threading globe ring assembly to fixture. Minimum 7½” required.

Remove 3 screws from globe ring assembly and set aside. Position exit sign housing over globe, line up 3 holes in housing with 3 threaded holes in globe ring, assemble with 3 screws and tighten.

Aiming exit sign to desired position is accomplished by loosening globe ring locking screw and turning exit sign. Maximum rotation 90°. Then tighten locking screw. Locking screw must enter notch in globe ring assembly to insure secure fastening.

Caution must be used when handling glass exit sign panels to prevent breakage.

To install exit sign panels, rotate locking tabs on side of exit sign housing, open hinged doors and insert exit sign panels in tracks in housing. Close doors, rotate locking tabs.

Periodic cleaning may be by dusting or damp cloth.
