W2SR SERIES DISCONNECT SWITCHES WITH INTERLOCKED ARKTITE® RECEPTACLES

For Class I, Div. 2 Areas • Installation & Maintenance Information

APPLICATION

W2SR Series enclosed heavy-duty disconnect switches with interlocked ARKTITE receptacles are designed to provide connection and distribution of secondary electrical power (600 volts or less) between a power source and portable or stationary electrical equipment. W2SR Series switches with interlocked ARKTITE receptacles are supplied in 3-wire, 4-pole non-fusible arrangements with Style 2 grounding where ground is connected through an extra pole and the shell. Refer to Crouse-Hinds Product Catalog for a detailed description of this grounding method.

W2SR Series switches are interlocked both with the enclosure door and ARKTITE receptacle. The plug cannot be withdrawn or inserted unless the switch is open (OFF). The enclosure cover cannot be opened when plug is engaged and the switch is closed (ON). When the switch is open (OFF) the switch cannot be put in a closed (ON) position with the door open.

The switch is factory sealed making the W2RS suitable for use in Class I, Division 2, Groups B, C and D hazardous environments. The enclosure is rated Type 3R and 7 B C D (Div. 2).

The ARKTITE receptacles supplied with the W2SR series enclosures are polarized to prevent mis-matching. Each enclosure is used with specific Crouse-Hinds APJ, NPJ, CPH, and CPP Series ARKTITE plugs with the same electrical ratings, grounding style and contact configurations. Refer to Crouse-Hinds Product Catalog for a complete listing of compatible W2SR Series Interlocked ARKTITE receptacles and matching ARKTITE plugs.

W2SR Series enclosed disconnect switches and Interlocked ARKTITE receptacles may be pole mounted or installed on flat vertical surfaces. W2SR Series products are designed for use in industrial areas that are subjected to dust, dirt, chemical vapors or moisture, both indoors or outdoors.

CAUTION
The W2SR Series enclosure should be installed, inspected, operated and maintained by qualified and competent personnel.

INSTALLATION

WARNING
Electrical power must be turned OFF before and during installation and maintenance.

1. Select a mounting location that will provide suitable strength and rigidity for supporting the enclosure. Fasten unit to mounting location with the four mounting lugs using 3/8 inch diameter mounting bolts or screws. The mounting lugs may be rotated 90 degrees or moved to the vertical center line position for pole mounting.

- Always locate enclosure in vertical position with receptacle contacts pointing downward.
• The recommended mounting height from ground or floor level to the bottom of the receptacle is 42 to 52 inches.

**WARNING**
W2SR receptacle housing must be securely attached into a permanently grounded system in accordance with Article 250 of the National Electrical Code.

2. Determine the type of distribution system to be used that will comply with NEC requirements and ensure grounding continuity.

Proper grounding of systems and circuit conductors is required to limit hazardous voltages caused by lightning, line surges or unintentional contact with higher voltage lines and to stabilize the voltage to ground during normal operation. All conductive materials that enclose the electrical conductors or attached equipment or forming part of such equipment must be grounded. A permanent conducting connection must be made between all such equipment and the earth.

Typical distribution systems are illustrated below:

3. Attach enclosure into electrical distribution system to ensure equipment grounding continuity. See Table 1 for conduit opening sizes. Conduit openings are furnished with a reducer which may be removed to obtain a larger opening. The locknut and bushing must meet the requirements of the National Electrical Code.

WIRING CONNECTIONS

1. Establish a wiring pattern for your system.

WARNING
Before installing a W2SR Series enclosed disconnect switch and interlocked ARKTITE receptacle, a wiring pattern must be established for your system. Locations having different voltages, frequencies or types of current (AC or DC) MUST NOT have interchangeable attachment plugs as stated in paragraph 210-7F of the National Electrical Code.

CAUTION
When wiring to switch terminal, be sure to insert the wire between the bearing plate of the terminal and the base of the lug. The screw must bear on the bearing plate and NOT directly on the wire.

2. Connect grounding conductor when used. Pull all phase conductors into enclosure and make connections to the line side pressure connector terminations following the wiring pattern established for your system. (See Table 2 for wire size information).

FIGURE 2
W2SR Interior (Fusible Type Shown)

3. Check plug/receptacle polarization.

The ARKTITE receptacles on the W2SR enclosures are polarized so that mating plugs can enter the receptacle only one way. Also, the mating contacts in the receptacle and corresponding plug are identified by numbers on the insulating recesses. Note: Some ARKTITE plugs manufactured prior to 1982 identify the mating contacts by color. Contact members in the receptacle must always mate with those in plug identified by the same number (or color).

This assures proper polarity or phase rotation of conductors through receptacle and plug.

Before energizing this system, verify polarity correctness with a continuity check. Correct polarity MUST be ascertained before using the equipment.

Check insulation resistance to be sure system does not have any short circuits or unwanted grounds.

STYLE II GROUNDED THROUGH EXTRA GROUND CONTACT

4. Test wiring for correctness with continuity checks and for unwanted grounds with insulation resistance tester.

5. Place operating handle in open (OFF) position then close cover and secure with two compression spring draw pull catches.

6. Before turning on power to W2SR enclosure, check safety interlock mechanism for proper operation.
• The plug cannot be inserted or withdrawn unless the switch is open (OFF).

• The enclosure door cannot be opened when the plug is inserted and the switch closed (ON). When the switch is open (OFF), it cannot be put in a closed (ON) position with the door open.

CAUTION
Forcing the switch operator handle mechanism without using proper ARKTITE plug or with enclosure door open will damage safety interlocks.

MAINTENANCE

WARNING
Always disconnect primary power source before opening enclosure for inspection or service.

1. Frequent inspection should be made. A schedule for maintenance check should be determined by the environment and frequency of use. It is recommended that it should be at least once a year. We recommend an Electrical Preventive Maintenance program as described in the National Fire Protection Association Bulletin NFPA No. 70B.

2. Perform visual, electrical, and mechanical checks on all components on a regular basis.

• Visually check for undue heating evidenced by discoloration of wires or other components, damaged or worn parts, or leakage evidenced by water or corrosion in the interior.

• Electrically check to make sure that all connections are clean and tight, and that blade contacts make of break as required.

• Mechanically check that all parts are properly assembled, interlocks working, and operating mechanisms move freely.

WARNING
If any part of the switch, receptacle and/or plug appears to be broken or damaged, DISCONTINUE USE IMMEDIATELY. Replace, or properly repair the item before continuing service.
