Description

The EXR301 Series 120V AC rotating signaling appliances are intended for general utility signaling use. They are UL and cUL listed for use in Class I, Division 1, Group C and D, Class I, Division 2, Group A, B, C and D, Class II, Division 1, Group E, F and G, Class II, Division 2, Group F and G, and Class III Division 1 and 2 hazardous locations with operating temperature codes per following chart.

The beacons are UL and cUL Listed as Type 3R, 4X, and Marine enclosures.

The rotating assembly is driven by a motor that revolves 75 times per minute.

The beacons are available with pendant, bracket, ceiling or stanchion mounting modules. See Figure 1.

Installation

b. **Ceiling Mount Models** (Figure 3): Mount the catalog number EV22, ceiling/wall mounting module, using appropriate hardware (not supplied) suitable for the mounting surface. Proceed to step 2.

c. **Wall Mount Models** (Figure 4): Install the catalog number EV22 ceiling/wall mounting module using appropriate hardware (not supplied) for the mounting surface. Install the catalog number EV87 wall mounting elbow to the wall box. Run the unit’s wiring through the elbow to the wall box. Proceed to step 2.

d. **Stanchion Mount Models** (Figure 5): Install the catalog number EVMJ4, stanchion mounting module, to the main housing. Run the unit’s wires through the 1 1/4” conduit to the appropriate junction box. Install the unit on the conduit. Proceed to step 2.

2. Connect field earth ground wire to ground screw or earth ground via conduit system.

3. Using wire nuts, connect the incoming (+) or white wire to the unit’s two (+) white wires and the incoming (-) or black wire to the unit’s two (-) black wires. See Table 2 for required supply wire temperature ratings.

4. As appropriate, install the fixture on the mounting module.

5. Apply power to the unit and ensure proper function.

---

**WARNING**

To reduce the risks of ignition of hazardous atmospheres and shock, do not apply power to the unit until installation has been completed and unit is tightly assembled and secured.

---

**WARNING**

To reduce the risk of ignition of hazardous atmospheres and shock, keep assembly tightly closed when circuits are energized.
**Maintenance**

Disassemble the unit as follows (Figure 6):

1. Loosen the (3) guard screws and remove the guard.
2. Loosen the globe and ring assembly set screw. Insert a suitable tool into the notches in the globe and ring assembly and loosen the assembly by prying in a counterclockwise direction. Remove the ring and globe assembly.
3. Refer to Table 1 for the correct replacement catalog number and replace the necessary part.
4. To replace, simply screw the unit on until it seats firmly onto its gasket. Tighten the unit another 1/8 to 1/4 turn. Tighten the setscrew.
5. Reinstall the guard, where applicable, and secure using the three supplied screws.
6. After the unit is assembled, apply power and make sure the unit functions properly.

**WARNING**

To reduce the risk of ignition of hazardous atmospheres and shock, keep assembly tightly closed when circuits are energized.

To reduce the risk of ignition of hazardous atmospheres and shock, disconnect from the supply and circuit and allow five (5) minutes for stored energy to dissipate before disassembling the unit.
