APPLICATION

Dust cover kit for IHB LED Luminaire.

WARNING

To avoid the risk of fire, explosion or electric shock, this product should be installed, inspected and maintained by a qualified electrician only, in accordance with all applicable electrical codes.

WARNING

To avoid electric shock:
• Be certain electrical power is OFF before and during installation and maintenance.
• Luminaire must be supplied by a wiring system with an equipment grounding conductor.

To avoid burning hands:
• Make sure luminaire lens and housing are cool when installing and performing maintenance.

APPLICATION

Dust cover kit for IHB LED Luminaire.

- Suitable for operation in ambient -40°C to 60°C
- IP 4X
- Suitable for damp locations

INSTALLATION

DUST COVER

1. Place the dust cover on the luminaire in the position shown in Figure 1.
2. Install the ¼-20 screws provided with the dust cover (see Figure 1). Screws will self-thread into the grooves on the sides of the luminaire (see Figure 4). Tighten screw until flush with surface (25 in.-lbs.). The quantity of screws holding the cover to the luminaire varies depending on the lumen configuration (see Chart 1). Ensure the dust cover is properly positioned and secured to the luminaire.
3. Route the wire(s) from the luminaire through the cable gland in the top of the dust cover.
4. Tighten the wire gland nut to secure the cable.
5. Refer to IF 1726 for more additional information on installation and maintenance.

Figure 1

DUST COVER CONFIGURATIONS WITH PENDANT MOUNT

1. Install the pendant mount bracket with the hardware provided, four (4) ¼-20 screws (see Figure 2). Center the pendant mount bracket on luminaire (see Figure 2). Measure from each end of the luminaire to the edge of the pendant mount on each side. The distance from side to side should be equal or within 1/16” to each other. Tighten the ¼-20 screws to 65 in-lbs. and tighten the 10-24 screws to 21 in-lbs. DO NOT REMOVE MOUNTING TAB RETENTION SCREWS. If mounting tab retention screws are removed, make sure to re-install and tighten to 65 in-lbs. torque.
2. Thread the lock nut onto the appropriate ¾” NPT conduit all the way up the threads (see Figure 3).
3. Place the luminaire onto the conduit using the hole located in the center of the pendant mount bracket. Install the throat bushing and tighten to 42 ft.-lbs. Rotate the luminaire to the proper alignment before securely tightening the lock nut (hand tight plus a quarter turn). Tighten lock screw in the throat bushing to 9 in-lbs. (see Figure 3).
4. Route the wires from the gland in the dust cover to the conduit.
AIRCRAFT CABLE MOUNTING

**WARNING**

Aircraft cable mounting is intended for dry locations only.

1. Mounting tabs are located 1" from each end of the luminaire from the factory. If mounting tabs need to be relocated or become loose, tighten the 10-24 screws to 21 in.-lbs. before hanging the luminaire. Mounting tab retention bolts should be tightened to 65 in.-lbs. in all four corners of the luminaire. Mounting tabs should be placed equal distance from the ends of the luminaire to assure the luminaire hangs level.

2. Install two (2) aircraft cable assemblies to the luminaire with one aircraft cable assembly at each end of the luminaire (refer to IF 1726 for more information). Do not exceed an angle greater than 30° between the cables and the gravity line. Adjust the length of the aircraft cable assembly to assure the luminaire hangs level. Mount the luminaire a minimum of 36 inches away from the ceiling. Refer to B-Line FIS-164 Instruction Sheet for further details and information.

3. Use the factory installed wire (SOOW cable) for electrical connection to the appropriate junction connection. See the wiring section in IF 1726 for more information.

**JACK CHAIN MOUNTING**

1. Mounting tabs are located 1" from each end of the luminaire from the factory (see Figure 4). If mounting tabs need to be relocated or become loose, tighten the 10-24 screws to 21 in.-lbs. before hanging the luminaire. Mounting tab retention bolts should be tightened to 65 in.-lbs. in all four corners of the luminaire. Mounting tabs should be placed equal distance from the ends of the luminaire to assure the luminaire hangs level.

2. Chains should be cut to equal lengths to assure the luminaire hangs level. Install four (4) hooks and four (4) chains to the luminaire. One hook and one chain per mounting bracket found at each corner of the luminaire. Mount the luminaire a minimum of 36 inches away from the ceiling.

3. Use the factory installed wire (SOOW cable) for electrical connection to the appropriate junction connection. See the WIRING section in IF 1726 for more information.
