Chico® LiquidSeal
Mixing Instructions

200 mL

1. Warm package to a minimum 10°C (50°F) before using, and ensure the cable gland is at least 5°C (40°F).
2. Make sure all contact surfaces are clean, dry and free of moisture, dirt, grease, oils or any other contamination.
3. Remove two (2) cartridge caps and retain larger cap.
4. Connect and lock the mixing nozzle to the dispensing tube/cartridge.
5. Install the dispensing assembly/cartridge into the dispensing gun.
6. Prime the dispensing gun and safely dispose of approximately 10 mL after the resin has reached the end of the mixing nozzle.
7. Squeeze out the remaining mixed contents as needed.

Care:
Any mixing nozzle holding the same resin for over 15 minutes must be disposed of.

Storage:
To properly store the cartridge between uses, remove the mixing nozzle and wipe the dispensing tube/cartridge tip to remove any excess material and fit the locking cap back onto the cartridge tip. Make sure to store cartridge horizontally.
