Angular Bracket Mount APX1097MTK (Ceiling Mount Only):

1. Make sure that the power is disconnected and the area is free of flammable or explosive gases, vapors or dusts before installing the luminaire.
2. Measure and mark four (4) holes to wall or ceiling for bolts at center-to-center measurement (see Figure 1). Mount upper bracket to the ceiling with sufficient strength to support the luminaire.
3. Install the lower brackets to the luminaire with the hardware provided. Install the lower bracket using two (2) hex head 3/8-16 x 1/2" screws. Torque the 3/8-16 screws to 20 ft.-lbs. (27 N-m).
4. Use two (2) 1/4-20 screw and cap nut to assemble lower and upper brackets together in straight or angular orientation. Torque 1/4-20 screw and cap nut to 75 in.-lbs. (8.5 N-m). Luminaire is now ready for mounting.
5. Use threaded connections for wiring entry and close unused opening with provided conduit plug. Torque plug or connecting conduit to the torque specification in Table 1.

Chain Mount APX1093MTK (Ceiling Mount Only):

1. Make sure that the power is disconnected and the area is free of flammable or explosive gases, vapors or dusts before installing the luminaire.
2. Prepare ceiling with desired hook or chains to support the luminaire.
3. Mount the chain mount brackets on luminaire using two (2) hex head 3/8-16 x 1/2” screws. Torque 3/8-16 screws to 20 ft.-lbs. (27 N-m).
4. Luminaire is now ready for mounting with chain. Chain angle must be greater than 30° in relation to light luminaire (see Figure 2A).
5. Use threaded connections for wiring entry and close unused opening with provided conduit plug. Torque plug or connecting conduit to the torque specification in Table 1.
1. With the power shut off, use a No. 2 Pozidriv screwdriver to remove all six (6) retaining screws from the luminaire body.

**NOTE:** The screws are captive and will remain in the driver housing.

2. Lanyards are provided to hold the driver housing in position.

3. Make required connections for input power and dimming (if applicable).

   For wiring diagrams, see Figures 4A or 4B depending on the model.

4. Using a No. 2 Pozidriv screwdriver, reinstall the driver housing to the luminaire body. Install the retaining screws in the order shown in Figure 3. To ensure even compression of the gasket, start all six (6) screws 1-2 turns before applying the full torque of 32 in-lbs.

MAINTENANCE

1. Perform visual, electrical and mechanical inspections on a regular basis. The environment and frequency of use should determine this. However, it is recommended that checks be made at least once a year. We recommend an Electrical Preventive Maintenance Program as described in the National Fire Protection Association Bulletin NFPA No. 70B: Recommended Practice For Electrical Equipment Maintenance (www.nfpa.org).

2. The lens should be cleaned periodically to ensure continued lighting performance. To clean, wipe the lens with a clean, damp cloth. If this is not sufficient, use a mild soap or a liquid cleaner such as Collinite NCF or Duco #7. Do not use an abrasive, strong alkaline or acid cleaner. Damage may result.

3. Do not remove LED windows. There are no servicable components.

4. Visually check for undue heating evidenced by discoloration of wires or other components, damaged parts or leakage evidenced by water or corrosion in the interior.

5. Electrically check to make sure that all connections are clean and tight.

6. Mechanically check that all parts are properly assembled.

7. Luminaire should be dusted periodically to avoid build-up of dust and overheating the luminaire.

**REPLACEMENT PARTS**

Pauluhn™ Summit Luminaires are designed to provide years of reliable lighting performance. However, should the need for replacement parts arise, they are available through your authorized Eaton’s Crouse-Hinds Division distributor. Assistance may also be obtained through your local Eaton’s Crouse-Hinds Division representative or Eaton’s Crouse-Hinds Division Sales Service Department, 1201 Wolf Street, Syracuse, New York 13208, Phone (866) 764-5454.

**WARNING**

To avoid the risk of explosion, fire or electrical shock, this product must be maintained by qualified personnel.

**DIMENSIONS**

**DRIVER REPLACEMENT**

1. Based on the electrical ratings marked on the luminaire housing, one of the following LED drivers from Eaton’s Crouse-Hinds Division is suitable. Check and verify which particular driver is provided and based on that part number, order that specific driver from Eaton’s Crouse-Hinds Division. Prior to installation, ensure the same driver part number, voltage and current ratings of the replacement match the original driver ratings that came with the luminaire.

2. Disconnect supply power and ensure luminaire is cool and the area is free of flammable or explosive gases, vapors or dusts.

3. With the power shut off, use a No. 2 Pozidriv screwdriver to remove all six (6) retaining screws from the luminaire body.

4. Disconnect the input power to the LED driver and disconnect the blue and red leads from the LED driver to the LEDs.

5. Remove the driver from the housing and install the new driver using the four (4) 8-32 screws, torqued to 20 in-lbs.

6. See wiring instructions to complete the installation.
