THREDMAKER, with or without plastic alignment guide, provides an unthreaded rigid conduit with an NPT thread by use of just a wrench. NO CUTTING DIE is required.

Following three-step illustrations show ease and speed of attachment of THREDMAKER fittings.

**NOTE**
Attach approved insulating bushing where required by 1975 National Electric Code, Article 373-C.

Use CCT as a positioning gauge:
1. Hold fitting next to conduit end with CCT male threads in position desired.
2. Mark and cut conduit at rear edge of hex wrench section.
3. Install fitting as described above. The NPT threads will be right where you want them.

NOTE: To ensure water tightness apply plumbers compound to conduit end before attaching fitting.
