These cable tray conduit clamps are used to securely clamp conduit to the cable tray side rails. The clamps are suitable for use with EMT, IMC and rigid conduit. The conduit may be clamped at any desired angle.

The LCC clamps are UL Classified as grounding and bonding fittings that insure grounding continuity of the tray/conduit assembly.

**HOW TO INSTALL**

1. Locate clamp 1 on the tray flange 2 in the desired position and secure tighten set screw(s) 3.

2. After loosening nut 4 slide conduit under hook 5 setting it to the desired angle, and securely tighten nut 6.

**NOTE:** For inside flanged trays the vinyl cap 6 is used on the threaded end of the hook 5 to protect cables from abrasion by the threads.
