

## DESCRIPTION

The Loft WaveStream™ luminaire merges classic styling with cutting-edge technology to provide quality illumination and superior optical control. Using the WaveStream LED direct/indirect light engine, its wide batwing distribution makes it an excellent choice for lower ceiling applications and areas where ceiling uniformity is important. Stringent building energy requirements are also met effortlessly with five standard output levels and efficacy up to 120 lumens per watt. Available in 4', 8' and 12' sections with a multitude of options, the Loft WaveStream is well suited for commercial office spaces, schools, libraries and other architectural interiors.

## SPECIFICATION FEATURES

### Construction

Extruded aluminum housing forming a 7-1/2" x 2-1/2" architectural profile. Modular 4'-0", 8'-0" and 12'-0" sections combine for continuous runs.

### End Caps

Standard end caps are precision die-cast aluminum, mechanically attached without exposed fasteners. End cap adds 1-3/4" at each end.

### Shielding

Bottom lens is a high light transmission 0.08" thick frosted acrylic material.

### Optics

Precision formed optical assembly with optical grade acrylic lenses provide an ideal direct/indirect optical distribution using WaveStream technology. Low voltage WaveStream LED light engine is field-replaceable.

### Electrical

Long-Life LED system coupled with electronic driver to deliver optimal performance. Projected life is 100,000 hours at 81% lumen output. LEDs are available in 3000K, 3500K or 4000K with a typical CRI

≥ 85. Standard drivers are 0-10 volt continuous dimming that work with any 0-10V control/dimmer. Or, specify Digital Addressable Lighting Interface (DALI) drivers; for use with Fifth Light controls. See ordering information for details.

### Mounting

Standard aircraft cable mounts on 4'-0", 8'-0" and 12'-0" centers. Refer to installation instructions for various ceiling interface details.

### Finish

Fixture housings are high reflectance white using electrostatically applied polyester powder coat paint.

### Compliance

Components are UL recognized and luminaires are cULus listed for 25°C ambient environments, damp location listed, and RoHS compliant. DesignLights Consortium™ Qualified and classified for DLC Standard, refer to [www.designlights.org](http://www.designlights.org) for details.

### Warranty

Five-year warranty.

End Cap Side View

## TECHNICAL NOTES

- Dimming wires come standard in all LED fixtures but can be capped in the field for standard switched operation.
- When dimming is selected, a separate drop for low voltage control wires supplied as standard. A single drop may be supplied upon request.
- For approximate delivered lumens, take lumens per watt of desired fixture and multiply by 12 watts (100 lp/W x 12 = 1200 lumens delivered).
- Integral 347V electronic driver with STD 0-10V option only. Two drivers required for Light Level 5. Factory supplied remote transformer for all other driver/dimming options.
- Standard row configurations over 12' consist of 8' and 12' luminaires.
- Must be used in conjunction with a DALI control system. For a complete listing of Fifth Light Technology products and other solutions from Cooper Lighting Solutions, visit [www.cooperlighting.com](http://www.cooperlighting.com)
- Two HCD drivers required per 4' section for Light Levels 4 and 5.
- Two Fifth Light (5LT) drivers required per 4' section for Light Level 5.
- Step-dim not available in Light Level 1. Two step-dim drivers required per 4' section for Light Level 5.
- SV sensor works only with 0-10V drivers and is factory prewired to the driver for stand-alone control. Individual fixtures only. Order **#ISHH-01** for Programming Remote and **#ISHH-02** for Personal Control Remote.
- LWI sensor requires use of SR driver. Must be used in conjunction with a LumaWatt Pro control system. For complete LumaWatt Pro wireless solutions, visit [www.cooperlighting.com](http://www.cooperlighting.com)
- SW sensor works only with STD and HCD 0-10V drivers. Designed for use with the WaveLinX Wireless Connected Lighting system. For complete WaveLinX wireless solutions, visit [www.cooperlighting.com](http://www.cooperlighting.com)
- Integrated Sensors combined with Emergency Circuit require one UL924 Bypass Relay per emergency section to disable sensor control when normal power is lost.

**SVPD1 INTEGRATED SENSOR**

The Loft with Integrated Sensor technology provides automatic energy savings without sacrificing performance. Traditionally, these types of energy savings required coordination between the luminaire and a lighting control system. The Loft delivers superior lighting with integrated PIR occupancy sensing and daylighting controls.

Capture the benefits of traditional lighting controls, without complicated coverage planning or special wiring. Ideal for new construction or retrofit, the Loft delivers automatic ON to an energy saving light level, while ensuring lighting is turned OFF when the space is unoccupied.

The integral daylight sensors reduce the need for special daylight zone planning. The luminaire will automatically adjust the light level based on reflected light beneath the sensor in a closed loop method.

Occupied daylight light levels and unoccupied light levels can be adjusted using the integrated sensor programming remote (Catalog Number: ISHH-01). The integrated sensor personal remote (Catalog Number: ISHH-02) provides code compliant manual raise, lower, ON, OFF control.

The Loft with Integrated Sensors is easy to install with no special wiring and ensures energy savings out-of-the-box with default control settings.

**How it works:**

- When a user enters under an integral sensor, the luminaire controlled by that sensor turns ON to the daylight level (default 500 lux).
- Lighting will remain at the daylight level until the space is unoccupied. This will start the occupancy timeout period (default 20 minutes).
- If the space remains unoccupied for half of the timeout period, the lighting will automatically reduce to the Energy Saver light level (default matches occupied daylight level). This adjustable light level is often set to half of the occupied daylight level.
- At the end of the timeout period the lighting will go to the unoccupied light level. This adjustable light level uses the OFF default setting.
