Room Controller and Smart Devices use Click & Go technology:
The RC3D will automatically recognize any smart device connected with the quick connect cable (provided) and start working immediately upon power up with no programming required.
The RC3D defaults to Manual On/Automatic Off occupancy sensor mode for maximum energy savings. Office systems provide DoIP control of the Yellow, Red and Purple buttons as well as manual Raise/Lower of all dimmers.
The daylight sensor will automatically power up monitors in daylight deficient areas (remote adjustments can be made later).
*Refer to Room Controller website for more information on other integral or programming required benefits like Demand Response, Solitude Control, Egress Control, BMS Output, Alert Mode, Emergency Lighting Control, and Sliper Stations.
