Room Controller and Smart Devices use Click & Go technology:
The RCIDE will automatically recognize any smart device connected with the quick connect cable (provided) and start working immediately upon power up with no programming required.
The RCIDE defaults to Manual On/Automatic Off vacancy sensor mode for maximum energy savings. Office systems provide On/Off control of the Yellow, Red and Purple loads as well as manual Raise/Lower of all dimmers.
The daylight sensor will automatically or power up provide multi-zone daylight dimming in the space (remote adjustments can be made later)
*Refer to Room Controller website for more information on other integral sensor programming required benefits like Demand Response, Solitude Control, Egress Control, BMS Output, Alert Mode, Emergency Lighting Control, and Slider Stations.
