Room Controller and Smart Devices use Click & Go technology:

The Room Controller will automatically recognize any smart devices connected with the quick connect cables (provided) and start working immediately upon power up with no programming required.

The Room Controller defaults to Manual On/Automatic Off vacancy sensor mode for maximum energy savings. Wallstations buttons can toggle zones or trigger preset scenes and can be mixed within each wallstation.

ROOM CONTROLLER WIRING DIAGRAM

Control Sequence: Wallstations can be shared between up to four Room Controllers. Button presses will perform the same function in all connected Room Controllers. Uniquely connected Occupancy Sensors and Daylight Sensors will control the Room Controller they are connected to only. This can allow for Wallstations to be shared over a large area and Occupancy and Daylight Sensors to control smaller zones.
