OSW-U – Ultrasonic/Single Level (120/277V)

Overview

The self-contained OSW-U-0721-MV is an energy-saving, motion-sensing lighting control that replaces a conventional wall switch and utilizes ultrasonic technology to detect room motion. Wall switches are ideal for smaller spaces where you will not have obstructions of line-of-sight due to switch location, room orientation or furniture placement.

Features

- 120 and 277V in the same unit
- No minimum load requirement
- Air-gap switch ensures no leakage current to load
- Complete no gap coverage
- NEMA WD7 Guide robotic method utilized to verify coverage patterns

Description/Operation

The sensor produces a low-intensity, inaudible sound to detect occupancy in a room. Changes in the sensor’s acoustic wave caused by motion, such as walking into a room, reaching for a telephone or swiveling in a chair, will cause the lights to turn ON. The sensor does not respond to audible sound. In the Automatic On Mode, lights will turn ON automatically when a person enters the room. In Manual On Mode, lights are turned ON by pressing the touchplate at the top of the switch. When the room is vacated, lights turn OFF automatically after the programmed time delay. An airgap switch ensures no leakage current to load for maximum product reliability.

Applications

- Offices
- Conference rooms
- Board rooms
- Utility rooms
Coverage

The OSW-U-0721 series has a coverage range of 180°, a minor motion coverage area of approximately 300 sq. ft., and a maximum coverage area of approximately 500 sq. ft. Maximum coverage area may vary somewhat according to room shape and the presence of obstructions.

Controls

Override jumper

Switch to “M” for Manual ON.

Switch to “A” for Automatic ON.
