Accessories

Filters

DESCRIPTION

Lumière color and dichroic filters maximize your design alternatives. They secure to the interior of the fixture hood behind the lens by an easy to use snap ring. Most Lumière fixtures accept a combination of up to three lenses, louvers and color or dichroic filters.

Color Filters

Color filters allow the creation of spectacular lighting effects. You can even use mercury vapor color filters to blend other lamp types with fixtures using a mercury vapor light source. Filters are listed by lamp size – most Lumière fixtures that use these lamp sources accept color filters.

Dichroic Filters

Dichroic filters provide the best in exacting color rendition. The dichroic filters listed below are standard items.

ORDERING INFORMATION

Order color and dichroic filters as separate line items. Sample Number: F2-8
