Installation Instructions –
Define Gen 2 Perimeter GYP/FSR S122-S125

**WARNING**
RISK OF ELECTRIC SHOCK—Disconnect power at fuse or circuit breaker before installing or servicing.

**WARNING**
Risk of fire/electric shock. If not qualified, consult an electrician.

**WARNING**
Risk of fire or electric shock. Fixture wiring, driver, or other electrical parts may be damaged during installation. Check enclosed wiring and components.

**WARNING**
RISK OF PERSONAL INJURY - Fixture may become damaged and/or unstable if not installed properly.

**NOTE:** This product must be installed in accordance with the applicable installation code by a certified electrician familiar with the construction and operation of the product and hazards involved.

**NOTE:** Only those open holes indicated in the photographs and/or drawings may be made or altered as a result of kit installation. Do not leave any other open holes in an enclosure of wiring or electrical components.

**NOTE:** To prevent wiring damage or abrasion, do not expose wiring to edges of sheet metal or any sharp objects.

**NOTE:** Disconnect all power before proceeding.
Before starting any work, ensure that all power sources are turned off. All work must meet local/national electrical codes and be performed by a certified electrician.

**Installation Instructions**

**Define Series (2” - 5” Housing Size)**

**Individual and Continuous Luminaires - Perimeter Installation**

**For Installation in Gypsum Ceilings**

**MUST BE INSTALLED BEFORE COMPLETION OF CEILING!**

**Parts List**

- Luminaire
- Grid Bracket/Joiner (pre-installed in fixture)
- Access Plate (pre-installed in remote enclosure)
- Support Wire/Threaded Rod (by others)
- Shielded Cable (by others)
- J-rail
- Lens Removal Tool

**Cross Section**

**Spacing Details**

**Mounting Information**

- Extuded Trim Flange Details
- Refer to submittal drawings for detailed flange information

**BRACING**

(By Others)

FSR

“Flangeless” Gypsum Board
Mark wall at desired location for mounting J-rail. Use dimension “X” as shown on table of page 1 for locating the correct ceiling to mounting hole location. Using J-rail as a template, mark hole locations along wall for pre-drilling where needed. Secure J-rail to wall. Hardware, bracing, and other structural support for J-rail to be supplied and installed by contractor as needed. J-rail hole diameter is ¼” so #12 screws recommended.

Remove 1/4” knockouts to line up with threaded rods. FOR FSR ONLY: Using (2) 8-32 screws from the LED tray assembly, install aperture guide snugly to ensure housing opening does not open or close during installation. NOTE: This will be removed prior to reinstalling the lens.

Secure fixture to structure via tie wire or 1/4” tie rod and nut as required. Note: If desired or required, J-rail allows for up to 3/16” adjustment. Fixture can be shimmed for a shadow reveal effect if desired. Standard mounting is flush against wall.

Wiring should enter fixture housing as shown. Ties rods extend into housing and are secured with nuts. Tie wires can be looped through holes in top of housing if used instead of tie rods.
Connect feed wiring to fixture through wiring via push-in quick connects or wire nuts.

FOR CONTINUOUS ROWS: Insert torx head into joiner and drive screw into housing to hold fixtures together. Ensure there are no gaps between fixtures and joint is secure.

FOR CONTINUOUS ROWS: Repeat step 2 (and 3 for FSR) to prepare fixture. Slide fixtures together ensuring alignment pins are in the correct position.

FOR CORNER INSTALLATION: Prepare corner unit for installation. Identify power feed side (end toward Beginning of Run). Prep wires on power feed side for connection to previous section in the run / pattern. Add Joining Hardware. Install alignment pins with tapered side facing outward. Install gussets with provided screws. Install cast joiner brackets using provided screw. Note that for sections with a corner at each end, it may be necessary to install the alignment pins on the last fixture such that there is only 1/8” of the pin exposed or by removing the pins entirely.

Make appropriate wire connections between fixture housings using provided connectors.

Install blocking (FSR); gypsum board to meet fixture flange as required.
FOR FSR ONLY: Apply a generous amount of joint compound to fixture flange and “feather” at least 12” from fixture aperture. Ensure compound has properly cured before removing aperture bracket.

FOR FSR ONLY: Drive screws (provided by others) through fixture flange into structure as shown. Size and length of screws determined by local building code.

FOR FSR ONLY: Drive screws (provided by others) through fixture flange into structure as shown. Size and length of screws determined by local building code.

With fixture securely secured in opening, reconnect the first tray assembly to the power feed. Carefully tuck all wiring back into fixture. Reinstall screws to secure tray assembly back into housing. Continue reinstalling additional LED tray assemblies in the same manner using the quick disconnects pre-installed on the LED tray.

Insert Lens Removal Tool as shown, biased toward one side of the lens. Lifting from center of lens may cause lens to crack.

Tilt Lens Removal Tool as shown and gently pry lens up. Complete lens removal by hand.

Reinstall acrylic diffuser by squeezing one end, inserting that end into the fixture opening and slowly pressing the diffuser into the housing along the length of the lens until it snaps into place. For continuous runs, ensure seams of adjacent lenses are touching to avoid light leak. Diffuser film should not require re-installation, however, if required, insert tabs into the slots of the LED tray assembly with the shiny side facing toward the LED array.

Installation is complete.
